

Seizure Study Summary Score Algorithms

Child Attitude Toward Illness Scale [catis_fp.sas7bdat] – Month 18 & Month 36

Summary score

- Requires at least 8 of the 13 items to be complete.
- Reverse code variables by subtracting the value from 6: fault fromlike feelsick feeldiff feelbad sadsick startnew youhave fair sadhappy tohave
- This subscale is the mean of all items after recoding
- High score means a positive feeling about seizures
- Variable name: CATIS

Family Resources [famres_fp.sas7bdat] – Baseline, Month 18, & Month 36

Mastery subscale

- Requires at least 12 of the 18 items to be completed in order to calculate the score.
- Reverse code all variables by subtracting the value from 4
- This subscale is the mean of RES1 thru RES18 after recoding
- Variable name: FRMAST

Esteem subscale

- Requires at least 8 of the 12 items to be completed in order to calculate the score.
- Recode all variables by subtracting 1 from the value
- This subscale is the mean of RES19 thru RES30 after recoding
- Variable name: FRESTEEM

Infant Characteristics Questionnaire [icq_fp.sas7bdat] - Baseline

Difficultness subscale

- Requires at least 6 of the 9 items to be completed in order to calculate the score.
- Sum of the following with mean imputed for missing values: TIMFUS, CRYGEN, UPSET, LOUD, MOOD, ATTENT, PLAYALON, ATTBUS, OVDIFF
- Variable name: ICQDIFF

Unadaptability subscale

- Requires at least 2 of the 3 items to be completed in order to calculate the score.
- Sum of the following with mean imputed for missing values: RESPERS, RESPLAC, ADAPT

- Variable name: ICQUNADP

Resistance to Control subscale

- Requires at least 2 of the 3 items to be completed in order to calculate the score.
- Sum of the following with mean imputed for missing values: LEAVE, GOSTOP, REMOVE
- Variable name: ICQRESIS
